EKLERE

Process

We are currently based in the Dominican Republic and travel regularly to Haiti. Due to the nature of our work and thanks to technology we can take on projects from any part of the world. We have worked with clients in the U.S.A and in Canada

01- Initial meeting

Through phone calls, e-mail and meetings, we get to know your business, product and needs. Since every client is different, we strive to provide solutions specific to each one and getting to know you helps us in that process

02 - Research & idea pitch

After we've discussed your needs, we go "back to the lab", investigate and come up with ideas and strategies that are tailored for you. This is a part of the process where we continue to ask questions and come up with preliminary solutions

03 - Production & feedback

Once the initial concepts have been approved, we begin production of the work. We then submit it to you for feedback and necessary corrections. We try to involve our clients as much as possible during the whole development of the work

04 - Finalization

Once you are happy with what we've come up with together. We produce the final work, add the finishing touches and if needed even help you deploy the project.
